EXPERIENCE

Software Development Engineering I

Byteridge

July 2024 - Present

Remote

- Engineered core backend systems for an enterprise loan collection platform, building distributed data pipelines and audit frameworks that handle tens of millions of sensitive financial records.

Backend Systems

- Architected a distributed import processing queue using **Redis and SQL** to throttle concurrent file uploads; eliminated **Out-Of-Memory (OOM) Kubernetes pod crashes** by decoupling ingestion workflows and bounding resource contention.
- Engineered a high-throughput Data Reconciliation Service for the core file import pipeline, auditing up to **76+ million data points** per execution (200k rows with 380 columns) while automatically resolving complex derived changes and cross-account linked updates.

Performance Optimization

- Slashed critical API latencies from **180-second timeouts to sub-second** responses, unblocking user workflows by refactoring non-SARGable queries, optimizing execution plans, and replacing eager loading with data streaming.
- Optimized memory and compute usage for heavy data workflows in **.NET Core and Entity Framework**, cutting service memory footprints from **1GB to 700MB** and reducing CPU overhead by rewriting inefficient legacy code.

Internal tooling & Frontend

- Pitched and built an AI-driven log analysis tool after proposing the idea to senior leadership; dropped debugging time from **hours to minutes** by automating the parsing of **20 million App Insights logs** and leveraging AI to parse stack traces and output direct remediation steps.
- Building modular, highly reusable component libraries optimized for complex state transitions and rendering efficiency using **Next.js, TypeScript, and Redux**.

Software Development Engineering Intern

Byteridge

August 2023 - October 2023

Remote

- Achieved **90% backend code coverage** by engineering over 150 automated unit tests using Chai and Mocha, and integrated SonarQube to enforce strict continuous code quality analysis.
- Developed **API methods** with a focus on data operations, utilizing **Prisma Client with PostgreSQL** using **Node.js and Express.js**. Additionally, created user-friendly API documentation using Swagger.

PROJECTS

Chessmates

Next.js, React.js, TypeScript, ShadCN, Tailwind, Node.js, Express.js

- ChessMates is a comprehensive social media platform tailored for chess enthusiasts built with Next.js, React, and TypeScript for frontend, Node.js and Express.js for backend. Styled with ShadCN/Tailwind, TanStack Query for data fetching, Auth.js for authentication, and Redis caching for optimal performance.

SKILLS & EDUCATION

Frontend : NextJS, ReactJS, Redux, Tailwind, Material UI
Tanstack Query

Backend : Node.js, Express.js, MongoDB, Prisma, MSSQL,
PostgreSQL, .NET EF Core,

Devops : Docker, AWS

Languages: Javascript/Typescript, C#, SQL

B.Tech Computer Science 2020 - 2024
Vidyalankar Institute of Technology
CGPA: 9.78
